

The LA Skylight can be used on all low-pitch roofs, and is especially suitable for replacing existing frame skylights that are installed at roof level and for which leakage and drop-through risks are significant.

Configuration

Frame

The frame is manufactured of solid wood, fixed or openable.

Casement Skylight

The upper section consists of polycarbonate sheets in two or three layers. The polycarbonate is uncrushable and is manufactured in a clear or opalescent configuration.

Mounting Hardware

Sides and mounting components are manufactured of aluminium and have gaskets between the skylight and frame.

Sizes

Width

The LA skylight is supplied in two standard widths, 100 mm or 120 mm (interior hole cut-out).

Length

The length is adapted to need up to 6 metres, which is appropriate for most bearing beams that do not require supplementary lintels.

Accessories

- Opening hardware with screws or latches for comfort ventilation.
- Pressure-impregnated frame.
